

TINTERN GRAMMAR ENRICHMENT PROGRAM

The Enrichment program is offered to those students who would benefit from additional intellectual, creative or artistic enrichment.

Identified students in Years 5–8 will be able to select one of three enrichment Units which will be offered in Term 2. There will be a further three Units offered again in Term 3. Each Unit will run for 5–6 lessons over the term, at a time nominated by the teacher.

The Units are broad and rich in content. Information covered will be intellectually suitable for our brightest students who will benefit from this additional, rigorous material.

Examples of Units which have been offered are:

Introduction to Latin

Latin is one of the three most influential languages in the history of thought. An understanding of Latin, even in its most basic form, is immensely valuable and trains the mind for success in other subjects.

Astrophysics and the Big Bang

Students will be introduced to the modern theories about the origins, size and structure of the Universe. Distances between stars and Galaxies, exploration in space and radiation in the universe is also explored.

An exploration of Japanese animated films.

This Unit will explore the artistic mastery of Japanese animation films. Students will be introduced to the cultural traditions of Japanese animation and the process behind the films created.

If you have any questions regarding the Enrichment Program please contact Anthea Watkins, Horizon Coordinator on 03 9845 7839
